

## **New tech company opens its doors in Salisbury**

A brand new technology company celebrated its launch this week. CircuitByte offers hi-tech electronics design services to businesses wanting to create new and develop existing electronic products.

With combined experience of 25 years in engineering Co-Founders, Carl Matthews and Rob Steel have started this new venture to offer a competitive and agile electronics design service to the UK and beyond.

CircuitByte will work with the client to build a detailed specification for their product. They select the components required, design the printed circuit board and write the embedded software to create a complete electronic product.

“Setting up our own company and working for ourselves has been shared dream for a long time. With the economy on the up it was the time for us to seize the opportunity”

“We secured our first contract within the first week and just over one month in we are building a strong order book”

“Our goal is to become an established company in Salisbury and recruit new engineers by the end of our first year”
